FULL PROJECT PROPOSAL APPLICATION
(Please use these headings in your proposal)

Project Need: Describe the conservation need or problem the proposed project will address; the native Snake River fine-spotted cutthroat trout and/or Yellowstone cutthroat trout are our primary focus species in the South Fork and mainstem Snake River watersheds/tributaries. Other native trout

projects may be eligible on a case-by-case basis. Discuss how the project addresses a priority conservation action identified in the Request for Proposals, state or federal native trout conservation or recovery plans, and/or by the Western Native Trout Initiative Fish Habitat Partnership.

Project Objectives: Provide information that outlines what you want to achieve through the implementation of the project and how you are addressing the conservation need.

Activities Proposed: Describe the activities that will be conducted to meet the objectives.

Methodology: Describe how each activity will be implemented and the anticipated timeline for outcomes.

Short Term and Long-Term Measurable Conservation Outcomes: Describe how you will quantify the results of the grant project.

Project Budget and Matching Contributions: Please include a table that describes the costs of implementing the project, and the request from Jackson Hole One Fly for salaries, benefits, supplies (under \$5000), equipment (over \$5000), contract labor or services, travel, and “other” expenses. In addition, please indicate sources and amounts of match that will be applied for, pending or already received for the project. Match should be at least 1:1 (cash or in-kind), but a larger match makes the application more competitive.

Evaluation and Monitoring: Describe how you will evaluate and monitor the results of your project.

Proposed Conservation Partnerships to implement the project:

Example table:

<u>Partner</u>	<u>Role</u>
U.S. Forest Service	Barrier design and conceptual modeling

Dissemination: How will the results of the project be communicated to the community and media?

Community Involvement / Stewardship: Describe your community partners and their role in the project.

Project Team and Qualifications: Briefly describe the staff and their qualifications, and if applicable, the types of consultants that will be part of the project team.

Other information (map of site and location in the watershed, optional photos or other information not requested above):

History of any past Jackson Hole One Fly grants: Please list any projects in progress or completed that were funded in part by the One Fly.

Technical Reviews: Please attach 2 letters from technical reviewers on their letterhead and include them with the application. At least one of the letters needs to be from a federal and/or state agency biologist such as National Park Service, Bureau of Land Management, USDA Forest Service, U.S. Fish and Wildlife Service, and/ or Wyoming, Montana or Idaho fish and wildlife agencies.

Please make sure the review letters are either attached to the application or emailed to Krystyna no later than by Friday, March 1, 2024.

Thank you for your interest in One Fly and conservation and for all you do to protect, enhance and restore habitats for the benefit of trout!
